Portfolio

EXPERIENCE

Goldman Sachs Intern

Jan 2026 - Jun 2026

Bengaluru, Karnataka

- Deployed ETL workflows (Alteryx, SQL, Python) to process data from lakes and APIs. Built a multi-source reconciliation system and a validation system with 150+ custom rules to catch misreported data and prevent downstream discrepancies.
- Developed a self-executing BUA tracking system to monitor work aging and SLA breaches. Orchestrated 4 daily/weekly/monthly reporting emails to 25+ stakeholders, integrating auto-alerts that request user comments on breached items to enhance operational oversight.
- Automated documentation and data entry via workflows that scan emails and auto-generate the necessary documents. Engineered custom prompts to extract key financial attributes from agreements with over 85% accuracy. Deployed all tools to production, significantly reducing manual overhead and operational errors.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

Sep 2022 - Jun 2026

Amrita School of Engineering, Coimbatore, Tamil Nadu

CGPA: 8.43

Higher Secondary Education

Aug 2020 - Jul 2022

Resonance, Hyderabad, Telangana, India

CGPA : 9.66

Secondary School Education

Jul 2019 - Jun 2020

Narayana High School, Tirupati, Andhra Pradesh, India

CGPA : 9.61

PROJECTS

Fog Computing-Based Air Quality Monitoring System

Nov 2024 - Apr 2025

Fog Computing | Arduino | Raspberry Pi | LoRa | AWS | React | Node.js

- Architected a fog computing infrastructure for 6 sensor nodes, processing and filtering data at the edge with Raspberry Pi and LoRa to reduce cloud dependency and latency by 65%.
- Created and implemented a predictive sequence-to-sequence ML model and built a React dashboard to visualize both real-time AQI trends and future forecasts, featuring an automatic email alert system.
- Selected as a third-year student to exhibit the project at 'AVISHKAR', the CSE department's annual expo typically reserved for final-year students, recognizing the project's advanced nature.

Newsphere - Personalized News Aggregator

Dec 2024 - Apr 2025

React | Node | Express | MongoDB | JWT | Render | Git | NPM

- Developed and launched a full-stack news aggregator using the **MERN stack**, featuring personalized feeds, secure JWT authentication, and a complete admin dashboard.
- Integrated two distinct LLMs: **Twitter-RoBERTa** for algorithmic comment moderation and **Mistral-7B-Instruct** to power a conversational AI for news retrieval and topic inquiries.
- Engineered a performant backend, engineering a RESTful API with minimal response times and an automated data pipeline that aggregates articles from 3+ news APIs across 25+ unique feed combinations every 3 hours.

Safe Guard – Emergency Alert Application

Feb 2025 - Jul 2025

Flutter (Dart) | GPS | Native SMS Integration | Android

- Constructed a real-time emergency alert app in Flutter, achieving very low alert transmission latency and 100% delivery success on network signal during field tests on Android devices.
- Implemented a critical offline-first feature using native device SMS functionality, ensuring users can broadcast their GPS location to 5 pre-set emergency contacts without an internet connection.
- Crafted an emergency-focused UI/UX adhering to accessibility principles (large tap targets, high contrast), resulting in positive usability feedback from 25+ test users.

TECHNICAL SKILLS

Languages : C++, Java, Python, Dart, JavaScript, SQL

Frameworks / Technologies : MERN Stack (MongoDB, Express, React, Node.js), Flutter, HTML, CSS, Bootstrap

Tools : Linux, Git, AWS, Docker, Render, VS Code, Postman

CERTIFICATIONS

- Supervised Learning, Advanced Learning Algorithms - DeepLearning.AI
- AWS Academy Cloud Foundations - AWS Academy
- Networking Basics - Cisco Networking Academy
